The Problem

The traditional Data Centre environment is both critical and complicated. A dangerous mix.

The infrastructure teams within corporates have to work with many different systems from different vendors and get them to work together.

The initial integration can be difficult and time consuming and even once the systems go live you need to do extensive testing across all of the components every time you change even so much as the firmware level on any part of the system.
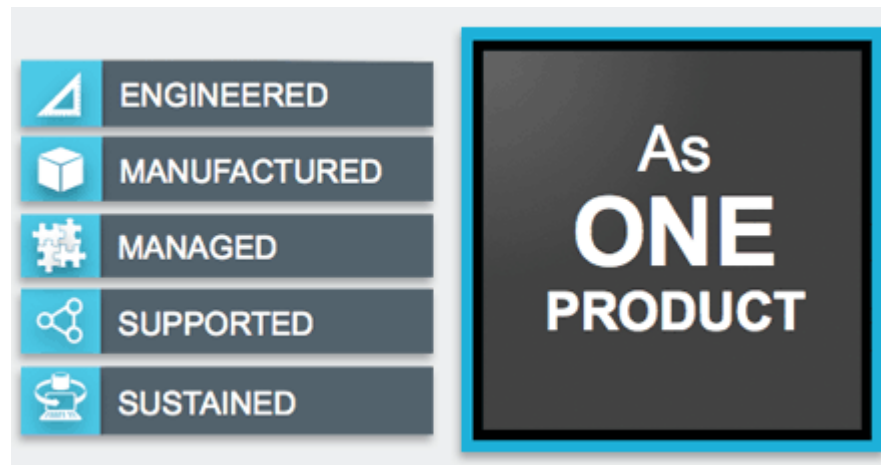

If something goes wrong then you need to deal with multiple vendors to get it fixed.

OPTIONS • SOLUTIONS • RESULTS

The Solution

Imagine if you could buy everything from a single vendor, but a vendor who had access to the best technology from other vendors, so there was no compromise.

Cisco, EMC and VMWare all had the same idea.

The Solution

VCE combines Cisco's UCS blade technology and networking with EMC's storage and VMWare's virtualisation technology.

Everything you need for your critical functions, all in a single system and supported by a single vendor. Everything pre-integrated and pre-tested so its ready to deploy straight away.

Any patches or firmware updates that are needed throughout the lifetime of the system are also complete pre-tested with all combinations of hardware.

Product Range

Vblock

Highly scalable systems which represent the World's most advanced converged infrastructure.

Vxblock

An extensible version of Vblock which can interoperate with other systems using VCE's Vscale architecture.

Vxrack

The hyper-converged solution from VCE. Can be integrated with Vblock and Vxblock via Vscale.

17 Ways

VCE produce great enterprise technology but there is more to a successful implementation of any technology than just choosing the right product.

At 17 Ways we have extensive experience of implementing technology within a large scale organisation, including experience of implementing and running Vblock systems. We can help you to make the right choices throughout your implementation and help you to set up your processes and teams for success.

We are happy to share our experience with you as part of your purchase of VCE systems through us, or to provide a more hands-on implementation service if you require.

About 17 Ways

We are an Australian technology company providing hardware, software and advice to Australian businesses.

Hardware

17 Ways are a reseller of converged and commodity hardware solutions. We are working with a number of the leading international companies in this space. In addition to providing the best solutions for your business we can also provide integration and migration support and can advise on the organisational change required to get the most out of your infrastructure solutions. Alternatively, if you prefer, we can manage the entire system for you.

Software

17 Ways offer a full range of software development and maintenance services. With senior staff based in Sydney and access to a team of highly skilled programmers and testers, we can provide a high quality service to companies that need custom software development.

Advice

Technology is increasingly complex and business critical. Making the wrong technology decisions has far reaching consequences for any business. At 17 Ways we have the experience to help you across a range of technical areas including infrastructure, applications, integration, operations, organisational structure and strategy. We can provide advice or implement part or all of the solution for you.
