"Solar Energy Hits the Dust"

by Viv Forbes

Dust on a solar panel will reduce its efficiency by up to 50%.
See: http://docs.google.com/present/view?id=dfhw7d9z_0gtk9bsgc

The Day Solar Energy disappeared in the Australian Dust Storm (23/9/09).

This picture was taken from the office of the Carbon Sense Coalition in south eastern Queensland, Australia. If the internet bugs have stolen the picture on your screen, you can see it at:
<http://carbon-sense.com/2009/09/24/dust/>

The green coalition in Canberra recently decreed that by 2020, just a decade away, Australia must produce 20% of its power using feeble energy sources such as sunbeams and sea breezes.

This Green Plan will require vast areas of dry and dusty Australian deserts to be covered by solar panels.

Have they allowed for the army of cleaning persons and the Murray Rivers of water that will be needed to wash the panels after every dust storm?

Maybe this where the Green jobs are coming from, and why Penny Wong is hoarding water permits?

Emissions Trading Schemes

All Emissions Trading Schemes impose new taxes on all uses of carbon energy. "ETS" thus more properly stands for "Extra Tax System".

But the ETS also has a rationing component. It is thus accurately called the Ration-N-Tax Scheme. Consumers should use this term exclusively. They will be the main victims.

Its total effect will be **"Less Energy at Higher Prices"**.

"Moon Ignores Sun" *Letter from L J B, Lake Tahoe, U.S.A.*

Quote from Ban Ki Moon (U.N. chief) addressing a press conference in New York, regarding proof of 'global warming':

"I recently travelled to the Arctic Circle, and I could see the ice melting."

Hello ... it was LATE SUMMER!! and, is this like 'watching the grass grow'?
The Technocrat-Hallucination Cult continues, sigh ...
