The study was conducted for CNN via telephone by SSRS, an independent research company. Interviews were conducted from May 02, 2018 to May 05, 2018 among a sample of **1,015** respondents. The landline total respondents were **402** and there were **613** cell phone respondents. The margin of sampling error for total respondents is +/-3.6 at the 95% confidence level. The design effect is 1.38. The margin of sampling error for the questions asked of 705 respondents from May 03, 2018 to May 05, 2018 is +/- 4.4. More information about SSRS can be obtained by visiting [www.ssrs.com](http://www.ssrs.com). Unless otherwise noted, results beginning with the March 31-April 2, 2006 survey and ending with the April 22-25, 2017 survey are from surveys conducted by ORC International. Results before March 31, 2006 are from surveys conducted by Gallup.

**EMBARGOED FOR RELEASE:  
Wednesday, May 9 at 3:00 p.m.**

### **MORE ON METHODOLOGY**

A total of 1,015 adults were interviewed by telephone nationwide by live interviewers calling both landline and cell phones. Interviews were conducted in English and Spanish. Among the entire sample, 29% described themselves as Democrats, 24% described themselves as Republicans, and 47% described themselves as independents or members of another party.

All respondents were asked questions concerning basic demographics, and the entire sample was weighted to reflect national Census figures for gender, race, age, education, region of country, and telephone usage.

Results for the full sample have a margin of sampling error of +/-3.6 percentage points. The margin of sampling error for the questions asked of 705 respondents from May 03, 2018 to May 05, 2018 is +/- 4.4. For the sample of 901 registered voters, it is +/-3.8 percentage points.

Crosstabs on the following pages only include results for subgroups with enough unweighted cases to produce a sampling error of +/-8.5 percentage points or less once adjusted for design effect. Some subgroups represent too small a share of the national population to produce crosstabs with an acceptable sampling error. Interviews were conducted among these subgroups, but results for groups with a design-effect adjusted sampling error larger than +/-8.5 percentage points are not displayed and instead are denoted with "N/A".
