Supplementary Fig. 1

Transcellular transport across MDCK II cell monolayers expressing BCRP.

Transcellular transport of drugs (10 μM) across MDCK II cell monolayers expressing BCRP (MDCK II-BCRP, squares) or GFP (MDCK II-GFP, circles) was determined at the designated time in the basal-to-apical direction (closed symbols) and the apical-to-basal direction (open symbols). Each data point represents the mean ± the SEM.
